INTRODUCTION

After many experiments and collaborations, after many orders, after kilometers of ropes of various types, quality, price, use and manufacturers, after crocheting /knitting/ weaving everything that could be crocheted/knitted/weaved (ropes, ribbons, cords, strips of cloth), and after testing the things we crocheted /knitted /weaved, we put the products to the test. We sat on them, we exposed them to all possible environmental elements such as cold, hot, rain and wind, placed them on sand soil and cement and even let them be bathed by the seawater on the beach.

We concluded that the existing raw materials are perishable and no matter how resourceful we were, we would be left with products of a short expiration date ultimately leading to dissatisfied customers. We boldly decided that the only way to be confident and proud of our creations would be to start from scratch. From the beginning. And we had a vision. To manufacture a new and innovative type of rope. We designed, developed, and produced our own rope [V&V® ROPE] so it would fit the specifications and technical excellence we wanted our products to have, and our customers to experience.

OUR ROPE

Our vision for the V&V® ROPE was multifaceted: to be resilient (polypropylene), waterproof, windproof, reflective of the sun (UV protected), stainproof, nonodor absorbing especially the industrial ones (i.e. during its manufacturing process), non-abrasive, non-allergenic, washable and easily dryable, soft in texture, manageable in knitting/crocheting/weaving, and available in various thicknesses in order to facilitate various construction needs. We wanted to be comfortable and confident working with it. And we are. We wanted to create a top-quality rope. And we did.

OUR TECHNIQUES

Crocheting - Numerous creations can be made from crochet. From simple dollies our grandmothers used to place on televisions and furniture for decorative reasons to entire oversized furniture and constructions. Everyone in our business knows how to crochet and enjoys the process. As if by magic our hands were meant to do it all along. What we design and produce is inextricably linked to Greek folklore tradition of a previous generation. We aspired to evolve this knowledge and expertise in such a way to suit our modern present times, yet without losing the original crochet character.

Macramé - Macramé gives us the satisfaction to bring to fruition anything we can possibly imagine. In doing so there is dedicated discipline to the vision while at the same time allowing for a paradoxical freedom to create. A design can have the perfect geometry or can be completely free-formed just like an artist would do. Macramé is a textile style produced by knotting techniques as opposed to weaving or knitting. Historically it is a long-standing and well-known technique used by sailors from covering anything like knife handles, bottles, to even parts of ships.

CUSTOMISATION

*The construction frames, the type of knitting/crocheting/ weaving, or the color palette choices can create product lines of a unique and specific identity. We present you our suggestions, but you can make your entire personal line, deciding on the style of your preference. In addition to our custom made products, you can also send us various structures or furniture frames that you wish to convert and restyle with any type of knitting, crochet or macramé, in any color or combination of colors of any pattern.
